Airam SmartHome Glass Panel Heater

Smart Glass Panel Heater

Description of product family

The SmartHome product family expands with a stylish heater that has a front surface of tempered glass. Connect the heater via WiFi to the Airam SmartHome app and you can control it from anywhere! The heater is perfectly suited to be used both at home and at cottages. The absolute advantage of a remote-controlled heater is the possibility to make necessary adjustments to the settings from anywhere and at any time, thus saving on energy costs. The device has two heating settings to choose from. A timer function allows the device to be turned on at a desired time. In addition to the app, the settings can also be controlled using the buttons on the heater. To ensure safe use, the heater has overheating protection. The heater can also be mounted on a wall. You can pair the heater with another SmartHome product and set it to trigger other functions. For example, when the temperature drops to a certain point, a device connected to a SmartHome plug will turn on.
