Airam SmartHome Oil heater

Smart Oil heater 2000W

Description of product family

The SmartHome product family expands with an electric oil heater, perfectly suited to be used both at home and at cottages. Connect the heater via WiFi to the Airam SmartHome app to control the heater's settings. The remote-controlled heater saves energy by allowing you to make adjustments to the settings from anywhere and at anytime! The device has three heating settings to choose from. The heater also has a timer function that allows you to turn the device on and off at a desired time. In addition to the app, you can also control the settings using the buttons on the heater. To ensure safe use, the heater has overheating protection. You can pair the heater with another SmartHome product and set it to trigger other functions. For example, when the temperature drops to a certain point, a device connected to a SmartHome plug will turn on.
