ALAN SOLAR LAMP 45 CM GREY 4000K

Description of product family

An elegant solar lamp with a light-sensitive switch and a motion detector. Lights downwards. Three functions. With the basic setting, the lamp lights up when it gets dark and burns constantly with a luminous flux of 75 lm. With the second setting, the motion detector is activated: whenever it detects motion, the luminous flux rises to 400 lm and then drops to 75 lm. With the third setting, the light only goes on from motion by the motion detector with a luminous flux of 600 lm and goes out after a while. This feature is very useful on paths and traffic routes. Change lighting functions by pressing the on/off button for 1-3 seconds. Clear LED, non-replaceable. The frame resists sunlight and coastal climate without fading. Made of stainless steel, grey shade. Fasten to a solid foundation with the included screws or use a ground foot.
